EDUCATION

National University of Singapore

Singapore

Bachelor of Computer Science in Information Security

Aug. 2022 – Jan. 2027 (Expected)

- Current GPA: 4.42/5.0
- Relevant courses: IS4302 Blockchain and Distributed Ledger Technologies, CS2113T Software Engineering & Object-Oriented Programming

EXPERIENCES

Infrastructure Engineering Intern

Jul. 2025 – Present

ByteDance Ltd.

Singapore

- Working closely with team members to design new features and enhance existing low-code platform for personnel management, streamlining administrative tasks
- Developing **automated testing frameworks with TypeScript Playwright** to validate user workflows and UI functionality, **enhancing regression test coverage and speed**

DevOps Engineering Intern

Jan. 2025 – Jun. 2025

Kiteworks

Singapore

- Developed and rigorously tested 10+ Python automation scripts integrated into Jenkins pipelines, **streamlining repetitive administrative and engineering tasks**
- **Automated daily reporting** on AWS EC2 instances usage into 2 HTML reports using Boto3 to **optimize resource monitoring and cost visibility**
- **Written and evaluated proof-of-concepts** on tools (Opengrep, GitLab's Secrets Detection and Container Scanning) for integration into critical CI/CD pipelines

Software Engineering Intern

May 2024 – Dec. 2024

Seagate Technology Holdings plc

Singapore

- Developed a Python program to parse C/C++ firmware tests source code and generate structured JSON files, enabling **efficient backend parsing and frontend display/search functionality**
- **Built and hosted a Flask web application** with an HTML/CSS/JavaScript frontend to visualize and search test data, helping developers identify non-redundant tests and **reducing test execution time by up to 70%**

PROJECTS

P2P Pawnshop (Ethereum Smart Contract Project) | *Solidity, Hardhat, GitHub*

Oct 2025 – Nov 2025

- Developed a peer-to-peer pawnshop dApp enabling collateralized lending through Ethereum smart contracts, as part of NUS course (IS4302 Blockchain and Distributed Ledger Technologies)
- Used Hardhat for contract development, testing, and deployment automation
- Contributed largely to unit and integrations testing, and refactoring of code base to support scaling

Full Stack Todo App | *Go (Gin), React, PostgreSQL, Docker Compose*

May 2025 – Present

- Designed and built a **RESTful API backend in Go with PostgreSQL** integration
- Implemented **role-based authentication and actions with JWT tokens**
- Containerised services with **Docker Compose, simulating microservices architecture**

Portfolio Site | *GitHub Actions, Nginx, Terraform, Ansible, Hugo*

May 2025 – Present

- Generated personal site with Hugo to showcase software and DevOps projects
- Automated deployments via CI/CD pipelines and secure hosting on AWS
- Explored the use of Terraform for provisioning and Ansible for file synchronising

TECHNICAL SKILLS

Languages: Python, Solidity, Go, SQL (PostgreSQL), HTML, JavaScript, TypeScript

Frameworks: Hardhat, Flask, JUnit, Gin, REST APIs

Developer Tools: Linux, Git, Docker, Jenkins, GitHub Actions, GitLab CI, Amazon Web Services (AWS), Terraform, Ansible, Selenium, Playwright
